EPA MRID Number 45385904

Data Requirement: PMRA Data Code:
EPA DP Barcode: D275213
OECD Data Point:
EPA Guideline: 164-1

Test material: RPA 407213**End Use Product name:** EXP 10623A**Concentration of a.i.** 500 g/L**Formulation type:** Suspendable Concentrate**Active ingredient**

Common name: Fenamidone

Chemical name

IUPAC: (+)-(4*S*)-4-Methyl-2-methylthio-4-phenyl-(1*H*)-1-phenylamino-2-imidazolin-5-one.CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-, (*S*)-.

CAS No: 161326-34-7.

Synonyms: Reason 500 SC Fungicide.

Methyl-2-methylthio-5-phenyl-3-phenylamino-3,5-dihydro-4*H*-imidazol-4-one.(*S*)-1-Anilino-4-methyl-2-methylthio-4-phenylimidazolin-5-one.(*S*)-5-Methyl-2-methylthio-5-phenyl-3-phenylamino-3,5-dihydroimidazol-4-one.

Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3-

(phenylamino)-, (*5S*)-.(*5S*)-3,5-Dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-4*H*-imidazol-4-one.

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

CITATION: Norris, F. A. 2001. RPA 407213: Terrestrial soil dissipation under agricultural field conditions. Study performed by Aventis CropScience, Research Triangle Park, NC; Florida Pesticide Research Inc., Oviedo, FL; Prairie Ag Research, Inc., Britton, SD; Plant Sciences, Inc., Watsonville, CA; Qualls Agricultural Research, Inc., Ephrata, WA; Agvise, Inc., Northwood, ND; and Centre Analytical Laboratories, Inc., State College, PA. Study submitted by Aventis CropScience, Research Triangle Park, NC. Agredoc File Number B003033. Study Number 98W13195. Study initiated February 20, 1998 and completed March 15, 2001.

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

Administrative conclusions: This study is classified acceptable and satisfies the guideline requirement for a terrestrial field dissipation study (164-1). This study was conducted in 4 sites in the USA.

EXECUTIVE SUMMARY:

Soil dissipation/accumulation of fenamidone (RPA 407213) under US field conditions was conducted in potato cropped plots at four sites in Florida (Site 1), North Dakota (Site 2), California (Site 3), and Washington (Site 4; Ecoregions were not reported). The experiment was carried out in accordance with the U.S. EPA Pesticide Assessment Guidelines Subdivision N, 164-1 and in compliance with the U.S. EPA FIFRA (40 CFR, Part 160) Good Laboratory Practice Standards. Fenamidone was broadcast six times (7-day intervals) at 0.2 kg a.i./ha in 6 x 119 m (Site 1), 24 x 64 m (Site 2), 24 x 36 m (Site 3), and 18 x 69 m (Site 4) plots. The applied rate corresponds to 100% of the proposed label rate. Rainfall was supplemented with irrigation at all of the test sites with the exception of Site 2 (ND) which was not irrigated during the study. Historic meteorological conditions were not reported for Sites 1 (FL) and 4 (WA). The treated plots were approximately 1 m apart at each test site. Control plots were not utilized at any of the four test sites.

The application rate was verified by the analysis of filter paper plaques that were placed in the target area and removed immediately after application. The average recoveries from the application monitors ranged from 42.0-62.5%, 35.5-98.0%, 54.0-83.5%, and 67.5-81.5% of the theoretical application rate, based on the six field applications for Sites 1 through 4, respectively. Field spiking of the samples was done by fortifying control soil with fenamidone (RPA 407213) and the analytes RPA 406012, RPA 408056, RPA 410914, and RPA 717879 at 0.1 mg a.i./kg soil. There was 65-108%, 89-113%, 90-99%, 103-125%, and 96-115% recovery (across all field sites) of the applied fenamidone, RPA 406012, RPA 408056, RPA 410914, and RPA 717879, respectively, in the field spiked samples.

Soil samples were taken following each of the six applications and at 4, 7, 14, 20, 27, 60, 91, 120, 151, 180, and 239 days posttreatment of the last application at Site 1 (FL), at 3, 7, 13, 21, 28, 57, 84, 114, 238, 297, 358, 422, 475, and 591 days posttreatment of the last application at Site 2 (ND), at 2, 7, 14, 21, 28, 57, 96, 124, 148, 180, 251, 306, 366, 433, 484, and 531 days posttreatment of the last application at Site 3 (CA), and at 3, 8, 15, 22, 30, 62, 92, 122, 154 and 189 days posttreatment of the last application at Site 4 (WA). All samples were taken to a depth of 90 cm except for samples collected immediately following the first application (15-cm depth). The soil samples were extracted with aqueous acetone, and fenamidone (RPA 407213) and its transformation products, RPA 406012, RPA 408056, RPA 409446, RPA 410914, RPA 410995 and RPA 717879, were analyzed by LC/MS/MS. The LOD and LOQ for parent and transformation products in soil were 0.003 mg/kg and 0.01 mg/kg, respectively.

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

At Site 1 (FL), the measured zero-time concentration (following the first application) was 0.036 mg a.i./kg soil, which is 38.7% of the applied rate (reviewer-calculated based on an expected concentration of 0.093 mg a.i./kg in the 0-15 cm soil depth). Data are reviewer-calculated means of four replicates. Following the sixth application, fenamidone dissipated from a maximum of 0.057 mg a.i./kg soil at 7 days to 0.039 mg a.i./kg soil by 14 days and 0.019 mg a.i./kg soil by 20 days, and was last detected at 0.013 mg a.i./kg soil at 27 days posttreatment in the 0-15 cm soil layer. The only significant transformation product detected at Site 1 was RPA 717879 (5-methyl-5-phenylimidazolidine-2,4-dione), with a maximum concentration of 10.4% of the total applied amount (0.558 mg a.i./kg soil), observed on the 27th day, in the 0-15 cm soil layer. No transformation products were detected at the end of the study period (180 days). The residues of fenamidone and its transformation products were primarily detected in the 0-15 cm soil layer.

Under field conditions at Site 1, fenamidone had a half-life of 22.4 days. A DT90 was not determined. At the end of the 180-day period, the total carryover of residues of fenamidone was 0% of the applied amount.

At Site 2 (ND), the measured zero-time concentration (following the first application) was 0.058 mg a.i./kg soil, which is 46.8% of the applied rate (reviewer-calculated based on an expected concentration of 0.124 mg a.i./kg in the 0-15 cm soil depth). Data are reviewer-calculated means of four replicates. Following the sixth application, fenamidone dissipated from a maximum of 0.173 mg a.i./kg soil at day 0 to 0.082-0.085 mg a.i./kg soil by 7-13 days and 0.061-0.072 mg a.i./kg soil by 21-28 days, and was last detected at 0.008 mg a.i./kg soil at 57 days posttreatment in the 0-15 cm soil layer. The only significant transformation products detected at Site 2 were RPA 408056 (5-methyl-2-methylthio-5-phenyl-3,5-dihydroimidazol) and RPA 717879 (5-methyl-5-phenylimidazolidine-2,4-dione), with maximum concentrations of 7.7% and 5.8% of the total applied amount (0.744 mg a.i./kg soil), observed on the 3rd and 297th day, respectively, in the 0-15 cm soil layer. Only RPA 717879 was detected at the end of the study period (591 days), at 1.7% of the total applied fenamidone in the 0-15 cm soil layer. The residues of fenamidone and its transformation products were only detected in the 0-15 cm soil layer.

Under field conditions at Site 2, fenamidone had a half-life of 20.5 days. A DT90 was not determined. At the end of the 591-day period, the total carryover of residues of fenamidone was 0% of the applied amount.

At Site 3 (CA), the measured zero-time concentration (following the first application) was 0.059 mg a.i./kg soil, which is 56.2% of the applied rate (reviewer-calculated based on an expected concentration of 0.105 mg a.i./kg in the 0-15 cm soil depth). Data are reviewer-calculated means of four replicates. Following the sixth application, fenamidone dissipated from a maximum of 0.066 mg a.i./kg soil at 14 days to 0.031 mg a.i./kg soil by 21 days and 0.021 mg a.i./kg soil by 57 days, and was last detected at 0.008 mg a.i./kg soil at 124 days posttreatment in the 0-15 cm soil layer. The only significant transformation product detected at Site 1 was RPA 717879 (5-methyl-5-phenylimidazolidine-2,4-dione), with a maximum concentration of 5.1% of the total applied amount (0.630 mg a.i./kg soil), observed on the 124th day, in the 0-15 cm soil layer. No

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

transformation products were detected at the end of the study period (531 days). The residues of fenamidone and its transformation products were primarily detected in the 0-15 cm soil layer.

Under field conditions at Site 3, fenamidone had a half-life of 81.5 days. A DT90 was not determined. At the end of the 531-day period, the total carryover of residues of fenamidone was 0% of the applied amount.

At Site 4 (WA), the measured zero-time concentration (following the first application) was 0.095 mg a.i./kg soil, which is 99.0% of the applied rate (reviewer-calculated based on an expected concentration of 0.096 mg a.i./kg in the 0-15 cm soil depth). Data are reviewer-calculated means of four replicates. Following the sixth application, fenamidone dissipated from a maximum of 0.082 mg a.i./kg soil at day 0 to 0.048 mg a.i./kg soil by 3 days and 0.028 mg a.i./kg soil by 8 days, and was last detected at 0.011 mg a.i./kg soil at 22 days posttreatment in the 0-15 cm soil layer. There were no transformation products detected at Site 1 at greater than 3.6% of the total applied amount (0.576 mg a.i./kg soil), and no transformation products were detected at the end of the study period (189 days). The residues of fenamidone and its transformation products were primarily detected in the 0-15 cm soil layer.

Under field conditions at Site 4, fenamidone had a half-life of 8.7 days. A DT90 was not determined. At the end of the 189-day period, the total carryover of residues of fenamidone was 0% of the applied amount.

A mass accounting was not calculated and non-extractable residues, volatilization, plant uptake, and run off were not measured in this study.

The major route(s) of dissipation of fenamidone under terrestrial field conditions at the four test sites was transformation.

RESULTS SYNOPSIS

Location/soil type: Site 1: Seminole County, Florida/sand soil
Site 2: Sargent County, North Dakota/loam soil
Site 3: Santa Clara County, California/loamy sand soil
Site 4: Grant County, Washington/loamy sand soil

Half-life: Site 1: 22.4 days ($r^2 = 0.13$)
Site 2: 20.5 days ($r^2 = 0.53$)
Site 3: 81.5 days ($r^2 = 0.12$)
Site 4: 8.7 days ($r^2 = 0.62$)

DT90: Not determined for any of the test sites.

Major transformation products detected: RPA 717879 (maximum of 10.4% of the total applied fenamidone)

Minor transformation products detected: RPA 408056, RPA 410914, RPA 409446, RPA 406012, and RPA 410995

Dissipation routes: Transformation:

I. MATERIALS AND METHODS

GUIDELINE FOLLOWED:

The study was conducted according to U.S. EPA Pesticide Assessment Guidelines Subdivision N, 164-1. The study did not deviate from the guideline.

COMPLIANCE:

The study was conducted in compliance with U.S. EPA FIFRA (40 CFR Part 160) Good Laboratory Practice Standards. Signed and dated GLP Compliance, Quality Assurance and No Data Confidentiality Claims statements were provided.

A. MATERIALS:

1. Test Material

RPA 407213

Chemical Structure of the active ingredient(s):

Description:

Suspendable Concentrate

Storage conditions of test chemicals:

Site 1: 56°F-94°F (p. 206)
Site 2: 39°F-85°F (p. 229)
Site 3: 21.9°F-93.2°F (p. 241)
Site 4: 56.2°F-79.9°F (p. 256)

Physico-chemical properties of Fenamidone:

Parameter	Values	Comments
Water solubility	0.0078 g/L	20°C
Vapour pressure/volatility	Not provided	
UV absorption	Not provided	
pKa	Not provided	
K _{ow} /log K _{ow}	640/2.8	
Stability of Compound at room temperature	Not provided	

Data were obtained from p. 15 in the study report.

2. Test site: The test sites were located near Oviedo in Seminole County, Florida (Site 1), near Brampton in Sargent County, North Dakota (Site 2), near Watsonville in Santa Clara County, California (Site 3), and near Ephrata in Grant County, Washington (Site 4; p. 19). The Florida test plot had previously been treated with Gramoxone (1.0 lb a.i./A), Poast (twice at 0.35 lb a.i./A), Tattoo C (rate not provided), Lannate LV (1.2 lb a.i./A), Ambush (twice at 0.25 lb a.i./A), Dolomite (2 tons/A), Manzate 200DF (1.1 lb a.i./A), Echo 720 (1.1 lb a.i./A), Ridomil 2E (1.0 lb a.i./A), Alliette (4.0 lb a.i./A) and Larvin 3.2 (0.5 lb a.i./A) in the previous two years (Appendix B, Table B-4, p. 206). The North Dakota test plot had not been treated with maintenance pesticides in the last two years (Appendix B, Table B-14, p. 229). The California test plot had previously been treated with Chlorothalonil (1.5 lb a.i./A), CGA-279202 (confidential, rate not provided), and Roundup (1.5 lb a.i./A) in the previous two years (Appendix B, Table B-24, p. 241). The Washington test plot had previously been treated with Glyphosate (1.0 lb a.i./A), Weedar 64 (1.0 lb a.i./A), Diquat (several, rate not provided), Asana XL (0.05 lb a.i./A), and Sencor 75DF (0.25 lb a.i./A) in the previous two years (Appendix B, Table B-34, p. 256).

Details	Site 1 (FL)	Site 2 (ND)	Site 3 (CA)	Site 4 (WA)
Leaching included in the study (Yes/No) (if included, describe in Section 5 ¹)	Yes	Yes	Yes	Yes
Run off included in the study (Yes/No) (if included, describe in Section 6 ^y)	No	No	No	No

Data were obtained from p. 15; Appendix B, Table B-2, p. 205; Tables B-6 to B-9, pp. 207-219; Table B-12, p. 228; Tables B-16 to B-19, p. 230-232; Table B-22, p. 240; Tables B-26 to B-29, pp. 242-244; Table B-32, p. 255; Tables B-36 to B-39, pp. 257-268 of the study report.

¹ Reviewer-calculated based on a soil depth of 15 cm (all sites) and a bulk density of 1.44 g/cm³ (Site 1), 1.08 g/cm³ (Site 2), 1.22 g/cm³ (Site 3), or 1.39 g/cm³ (Site 4).

2. Application Verification: At all four test sites, each application was verified by the analysis of filter paper plagues that were placed in the target area and removed immediately after application (p. 20). After the last application, the unused test substance remaining from each trial site was returned to Rhône-Poulenc for reanalysis.

3. Field Spiking: At each trial site, three sample bottles containing 20 g of untreated control soil were spiked with 2 µg each of fenamidone (RPA 407213) and the analytes RPA 406012, RPA 408056, RPA 410914, and RPA 717879 (p. 20). Three additional sample bottles containing 20 g of untreated control soil served as control samples.

4. Volatilization: Volatilization was not studied.

5. Leaching: At each trial site, sixteen cores (4 from each replicate plot) were taken from the treated plot up to 20 months after the last application to a depth of 90 cm (all sampling intervals except immediately following the first application) to determine the mobility of the test substance and analytes in the soil profile (p. 20).

6. Run off: Run off was not measured.

7. Supplementary Study: A frozen storage stability study was conducted using control soil collected from each of the four field sites (p. 22). The samples (50 g) were fortified with fenamidone (RPA 407213) and the metabolites RPA 406012, RPA 408056, RPA 409446, RPA 410914, RPA 410995 and RPA 717879 at 100 µg/kg (ppb) and stored frozen for up to 12 months prior to analysis (Appendix A, p. 111).

Data were obtained from p. 20, Table V, p. 26; Appendix B, Table B-8, p. 208; Table B-18, p. 231; Table B-28, p. 243; and Table B-38, p. 258 of the study report.

¹ Reviewer-calculated based on the sampling dates reported in Appendix B, Table B-18, p. 231.

² Reviewer-calculated based on the sampling dates reported in Appendix B, Table B-38, p. 258.

³ Storage length does not include samples that were reanalyzed for RPA 409446 and RPA 410995 following 426-606 days (all sites).

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

9. Analytical Procedures: Soil samples were initially analyzed for residues of fenamidone (RPA 407213) and its metabolites RPA 406012, RPA 408056, RPA 410914, and RPA 717879 and later reanalyzed to measure two additional analytes, RPA 409446 and RPA 410995 (p. 21). Soil samples were extracted twice by shaking with aqueous acetone (acetone:water, 3:1, v:v) and centrifuged. The supernatants were decanted, filtered, and the extracts were passed through a polystyrene-divinylbenzene polymer cartridge. The analytes were eluted from the cartridge with acetonitrile. The eluate was dried and reconstituted with aqueous acetonitrile for analysis by LC/MS/MS. The limit of quantitation (LOQ) for each analyte was 0.01 mg/kg.

A method validation study conducted using soil from each field site indicated that the analytical method was adequate for the detection of fenamidone (RPA 407213) and the metabolites RPA 406012, RPA 408056, RPA 409446, RPA 410914, RPA 410995 and RPA 717879 (Appendix C, pp. 703-704 and 712-713). Samples were fortified with fenamidone and its metabolites at 10, 50, and 500 ppb (1, 5, and 50X LOQ). Recoveries decreased slightly with the fortification level.

II. RESULTS AND DISCUSSION

1. APPLICATION MONITORS: The average recoveries from the filter paper plaques ranged from 42.0-62.5% (Site 1), 35.5-98.0% (Site 2), 54.0-83.5% (Site 3), and 67.5-81.5% (Site 4) of the theoretical application rate (Tables III, p. 25; Tables XIIa-XIIId, pp. 44-47). Reanalysis of the test substance remaining from each trial site following the last application indicated that the product was stable under the conditions of field storage during the application period as well as shipping and storage before and after the applications (p. 20).

2. RECOVERY FROM FIELD SPIKES: The mean recovery from the field spiked samples of fenamidone (RPA 407213), RPA 406012, RPA 408056, RPA 410914, and RPA 717879 were 108%, 113%, 94%, 125%, and 100%, respectively for Site 1 (FL); 71%, 89%, 90%, 103%, and 96%, respectively for Site 2 (ND); 65%, 108%, 91%, 114%, and 102%, respectively for Site 3 (CA); and 101%, 103%, 99%, 108%, and 115%, respectively for Site 4 (WA) (Table X, p. 31).

3. MASS ACCOUNTING: A mass accounting was not calculated by the applicant.

¹ Data are reviewer-calculated means of four replicates. In keeping with standard practice for averaging field data, the reviewer calculated the means using the value of 1/2 LOQ (0.005 mg/kg) for values reported as "<LOQ" and "ND" (not detected) in the data tables. Replicate data were obtained from Tables XII a-XIII, pp. 48-56 of the study report.

ND = Not Detected
NS = Not Sampled
NA = Not Analyzed

¹ Data are reviewer-calculated means of four replicates. In keeping with standard practice for averaging field data, the reviewer calculated the means using the value of ½ LOQ (0.005 mg/kg) for values reported as "<LOQ" and "ND" (not detected) in the data tables. Replicate data were obtained from Tables XIVa-XIVn, pp. 57-70 of the study report.

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

4. PARENT COMPOUND: At Site 1 (FL), the measured zero-time concentration (following the first application) was 0.036 mg a.i./kg soil, which is 38.7% of the applied rate (reviewer-calculated based on an expected concentration of 0.093 mg a.i./kg in the 0-15 cm soil depth; Tables XIIIa-XIIIi, pp. 48-56). Data are reviewer-calculated means of four replicates. The reviewer calculated the means using the value of $\frac{1}{2}$ LOQ (0.005 mg/kg) for values reported as "<LOQ" and "ND" (not detected) in the data tables. Fenamidone was detected at 0.036, 0.038, 0.124, 0.107, 0.073, and 0.049 mg a.i./kg soil following application 1 through 6, respectively, in the 0-15 cm soil layer. Fenamidone dissipated from a post final treatment maximum of 0.057 mg a.i./kg soil at 7 days to 0.039 mg a.i./kg soil by 14 days and 0.019 mg a.i./kg soil by 20 days, and was last detected at 0.013 mg a.i./kg soil at 27 days posttreatment in the 0-15 cm soil layer. Fenamidone was detected in the 15-30 cm soil layer at 0.007 mg a.i./kg soil from 4 to 14 days and was not detected below that depth.

At Site 2 (ND), the measured zero-time concentration (following the first application) was 0.058 mg a.i./kg soil, which is 46.8% of the applied rate (reviewer-calculated based on an expected concentration of 0.124 mg a.i./kg in the 0-15 cm soil depth; Tables XIVa-XIVn, pp. 57-70). Data are reviewer-calculated means of four replicates. The reviewer calculated the means using the value of $\frac{1}{2}$ LOQ (0.005 mg/kg) for values reported as "<LOQ" and "ND" (not detected) in the data tables. Fenamidone was detected at 0.058, 0.128, 0.155, 0.100, 0.128, and 0.173 mg a.i./kg soil following application 1 through 6, respectively, in the 0-15 cm soil layer. Fenamidone dissipated from a post final treatment maximum of 0.173 mg a.i./kg soil at day 0 to 0.082-0.085 mg a.i./kg soil by 7-13 days and 0.061-0.072 mg a.i./kg soil by 21-28 days, and was last detected at 0.008 mg a.i./kg soil at 57 days posttreatment in the 0-15 cm soil layer. Fenamidone was only detected once in the 15-30 cm soil layer, at 0.008 mg a.i./kg soil at 13 days and was not detected below that depth.

At Site 3 (CA), the measured zero-time concentration (following the first application) was 0.059 mg a.i./kg soil, which is 56.2% of the applied rate (reviewer-calculated based on an expected concentration of 0.105 mg a.i./kg in the 0-15 cm soil depth; Tables XVa-XVm, pp. 71-82). Data are reviewer-calculated means of four replicates. The reviewer calculated the means using the value of $\frac{1}{2}$ LOQ (0.005 mg/kg) for values reported as "<LOQ" and "ND" (not detected) in the data tables. Fenamidone was detected at 0.059, 0.024, 0.052, 0.022, 0.083, and 0.032 mg a.i./kg soil following application 1 through 6, respectively, in the 0-15 cm soil layer. Fenamidone dissipated from a post final treatment maximum of 0.066 mg a.i./kg soil at 14 days to 0.031 mg a.i./kg soil by 21 days and 0.021 mg a.i./kg soil by 57 days, and was last detected at 0.008 mg a.i./kg soil at 124 days posttreatment in the 0-15 cm soil layer. Fenamidone was not detected below the 0-15 cm soil layer.

At Site 4 (WA), the measured zero-time concentration (following the first application) was 0.095 mg a.i./kg soil, which is 99.0% of the applied rate (reviewer-calculated based on an expected concentration of 0.096 mg a.i./kg in the 0-15 cm soil depth; Tables XVIa-XVIIi, pp. 83-91). Data are reviewer-calculated means of four replicates. The reviewer calculated the means using the value of $\frac{1}{2}$ LOQ (0.005 mg/kg) for values reported as "<LOQ" and "ND" (not detected) in the data tables. Fenamidone was detected at 0.095, 0.067, 0.096, 0.112, 0.052, and 0.082 mg a.i./kg soil following application 1 through 6, respectively, in the 0-15 cm soil layer. Fenamidone dissipated from a post

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

final treatment maximum of 0.082 mg a.i./kg soil at day 0 to 0.048 mg a.i./kg soil by 3 days and 0.028 mg a.i./kg soil by 8 days, and was last detected at 0.011 mg a.i./kg soil at 22 days posttreatment in the 0-15 cm soil layer. Fenamidone was only detected once in the 15-30 cm soil layer, at 0.017 mg a.i./kg soil following the fifth application and was not detected below that depth.

The half-lives of fenamidone in soil under terrestrial field conditions using first-order kinetics and linear regression of the actual test substance concentrations in the 0-15 cm soil depth were:

Site 1 (FL)	Half-life = 22.4 days	DT90 = Not determined
Site 2 (ND)	Half-life = 20.5 days	DT90 = Not determined
Site 3 (CA)	Half-life = 81.5 days	DT90 = Not determined
Site 4 (WA)	Half-life = 8.7 days	DT90 = Not determined

The dissipation pattern of fenamidone was linear at each field site. However, data were variable between replicates at Site 1 (FL) and Site 3 (CA).

5. TRANSFORMATION PRODUCTS: The transformation products detected at Site 1 (FL) were RPA 717879 (5-methyl-5-phenylimidazolidine-2,4-dione) and RPA 408056 (4-methyl-2-methylthio-4-phenyl-2-imidazolin-5-one), with maximum concentrations of 10.4% and 2.7% of the total applied amount (0.093 mg a.i./kg x 6 applications = 0.558 mg a.i./kg soil), observed on the 27th and 14th day, respectively, in the 0-15 cm soil layer (Tables XIIIa-XIIIi, pp. 48-56). RPA 717879 was also detected twice in the 15-30 cm soil depth and once each in the 30-45, 45-60, and 60-75 cm soil depths, at <4.7% of the total applied amount (at 60 and 91 days) in the 15-30 cm depth and <1.6% (at 60 days) in the lower soil depths. Neither degradate was detected at the end of the study period (180 days). The registrant-calculated half-life of RPA 717879 was 1.20 months (Figure 2, p. 39).

The transformation products detected at Site 2 (ND) were RPA 408056, RPA 717879, RPA 410914 (5-methyl-2-methylthio-3-(2-nitrophenylamino)-5-phenyl-3,5-dihydroimidazol-4-one), RPA 409446 (5-methyl-3-(4-nitrophenylamino)-5-phenylimidazolidine-2,4-dione), and RPA 406012 (5-methyl-2-methylthio-3-(4-nitrophenylamino)-5-phenyl-3,5-dihydroimidazol-4-one) with maximum concentrations of 7.7%, 5.8%, 2.3%, 2.0%, and 1.6% of the total applied amount (0.124 mg a.i./kg x 6 applications = 0.744 mg a.i./kg soil), observed on the 3rd, 297th, 3rd, 3rd, 13th, and 3rd day, respectively, in the 0-15 cm soil layer (Tables XIVa-XIVn, pp. 57-70). Only RPA 717879 was detected at the end of the study period (591 days), at 1.7% of the total applied fenamidone in the 0-15 cm soil layer. The registrant-calculated half-life of RPA 408056 was 8.54 months (Figure 3, p. 40).

The transformation products detected at Site 3 (CA) were RPA 717879, RPA 408056, RPA 406012, RPA 410914, RPA 409446, and RPA 410995 (5-methyl-3-(2-nitrophenylamino)-5-phenylimidazolidine-2,4-dione), with maximum concentrations of 5.1%, 2.9%, 1.6%, 1.4%, 1.4%, and 1.3% of the total applied amount (0.105 mg a.i./kg x 6 applications = 0.630 mg a.i./kg) observed on the 124th, 14th, 14th, 14th, 57th, and 57th day, respectively, in the 0-15 cm soil layer (Table

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

XVa-m, pp. 71-82). RPA 717879 was also detected in the 15-30 cm soil depth at <1.4% of the total applied amount (from 180 to 484 days) in the 15-30 cm depth. None of the degradates were detected at the end of the study period (531 days).

The transformation products detected at Site 4 (WA) were RPA 408056, RPA 717879, RPA 406012, and RPA 410914, with maximum concentrations of 3.6%, 3.5%, 1.9%, and 1.6% of the total applied amount (0.093 mg a.i./kg x 6 applications = 0.576 mg a.i./kg) observed on the 8th day, 22nd day, fourth application, and fourth application, respectively, in the 0-15 cm soil layer (Tables XVIa-XVII, pp. 83-91). None of the degradates were detected at the end of the study period (189 days).

Table 13: Chemical names and CAS numbers for the transformation products of fenamidone.

Applicant's Code Name	CAS Number	CAS and/or IUPAC Chemical Name(s)	Chemical formula	Molecular weight	SMILES string
RPA 406012	151022-56-9	5-Methyl-2-methylthio-3-(4-nitrophenylamino)-5-phenyl-3,5-dihydroimidazol-4-one		356.4	
RPA 408056	Not assigned	4-Methyl-2-methylthio-4-phenyl-2-imidazolin-5-one		220.3	
RPA 409446	Not assigned	5-Methyl-3-(4-nitrophenylamino)-5-phenylimidazolidine-2,4-dione		326.3	
RPA 410914	Not assigned	5-Methyl-2-methylthio-3-(2-nitrophenylamino)-5-phenyl-3,5-dihydroimidazol-4-one		356.4	
RPA 410995	Not assigned	5-Methyl-3-(2-nitrophenylamino)-5-phenylimidazolidine-2,4-dione		326.3	
RPA 717879	6843-49-8	5-Methyl-5-phenylimidazolidine-2,4-dione		190.2	

Data obtained from Appendix C, pp. 296-300, in the study report.

6. EXTRACTABLE AND NON-EXTRACTABLE RESIDUES: N/A

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

Table 14: Dissipation routes of fenamidone under field conditions.

Route of dissipation	% of applied amount (at the end of study period)			
	Site 1 (FL)	Site 2 (ND)	Site 3 (CA)	Site 4 (WA)
Accumulation (residues) in soil/ carry over	0%	0%	0%	0%
Transformation (% of transformation products)	0%	1.7%	0%	0%
Leaching, if measured	Not observed	Not observed	Not observed	Not observed
Volatilization, if measured	Not measured	Not measured	Not measured	Not measured
Plant uptake, if measured	Not measured	Not measured	Not measured	Not measured
Run off, if measured	Not measured	Not measured	Not measured	Not measured
Total	Not determined	Not determined	Not determined	Not determined

7. VOLATILIZATION: Volatilization was not measured.

8. PLANT UPTAKE: Plant uptake was not measured from any of the treated plots.

9. LEACHING: Fenamidone (RPA 407213) and its transformation products RPA 406012, RPA 408056, RPA 409446, RPA 410914, RPA 410995 and RPA 717879 were generally not detected below the 15-cm soil layer (Tables XIII-XVI, pp. 48-91). Exceptions include fenamidone residues detected in the 15-30 cm soil depth at Site 1 (FL) at 0.007 mg a.i./kg soil at 4, 7, and 14 days posttreatment; RPA 717879 detected twice in the 15-30 cm soil depth and once each in the 30-45, 45-60, and 60-75 cm soil depths at Site 1 (FL) at 0.010-0.026 mg/kg in the 15-30 cm depth (60 and 91 days) and 0.006-0.009 mg/kg in the lower soil depths (60 days); and RPA 717879 detected in the 15-30 cm soil depth at Site 3 (CA) at <0.009 mg/kg from 180 to 484 days.

10. RUN OFF: Run off was not measured.

11. RESIDUE CARRYOVER: DT90 values were not determined for fenamidone at any of the four test sites. After 151 days at Site 1 (FL), 251 days at Site 3 (CA), and 189 days at Site 4 (WA) following the sixth application, 0% of the total applied parent compound, as parent and its transformation products, was detected in each of the test plots and has no potential to carryover into the following season (Table XIIIh, p. 55; Table XVk, p. 81; and Table XVIh, p. 90). After 591 days at Site 2 (ND), <3% of the total applied fenamidone was detected (primarily as RPA 717879) and has the potential to carryover into the following season (Table XIVm, p. 69).

12. SUPPLEMENTARY STUDY RESULTS: Data indicated that fenamidone (RPA 407213) is generally not stable in frozen storage. Mean fenamidone recoveries from the Site 2 (ND), Site 3 (CA), and Site 4 (WA) soil samples were 90-113% at day 0, decreased to 45-59% by 2 months, and

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

were 13-25% by 12 months (Table IX, p. 30). Recoveries were higher from the Site 1 (FL) soil samples where mean recoveries were 104% at day 0 and decreased to 75% by 12 months. The metabolites RPA 406012, RPA 408056, RPA 409446, RPA 410914, RPA 410995 and RPA 717879 were all observed to be stable in soil samples from each test site stored frozen for up to 12 months.

III. STUDY DEFICIENCIES: The study did not deviate from Subdivision N Guideline §164-1.

IV. REVIEWER'S COMMENTS:

1. The instability of fenamidone in frozen storage may have affected the study data. The study author stated that the analytical laboratory was instructed to analyze the samples within one month of sampling because it was thought that fenamidone is not stable in soil, even under freezer conditions (p. 19). However, the reviewer notes that the samples were analyzed for fenamidone following a maximum of 56-66 days at each field site (Table V, p. 26). Recoveries from the laboratory freezer storage stability study indicated that fenamidone is generally not stable in frozen storage. Following two months of storage, mean recoveries decreased from 90% to 58% in soil from Site 2 (ND), from 113% to 59% in soil from Site 3 (CA), and from 105% to 54% in soil from Site 4 (WA; Table IX, p. 30). Recoveries were significantly higher from the Site 1 (FL) soil samples which had mean recoveries of 104% at day 0 and 94% following 2 months.
2. The registrant-calculated half-lives of fenamidone in soil under terrestrial field conditions were 0.83 months at Site 1, 0.77 months at Site 2, 2.0 months at Site 3, and 0.28 months at Site 4. The registrant-calculated half-lives were calculated using least squares best fit exponential curves (p. 33; Figures 2-5, pp. 39- 42). These half-lives are comparable to the reviewer-calculated half-lives of 22.4 days ($r^2 = 0.13$) at Site 1, 20.5 days ($r^2 = 0.53$) at Site 2, 81.5 days ($r^2 = 0.12$) at Site 3, and 8.7 days ($r^2 = 0.62$) at Site 4. The reviewer-calculated half-lives were calculated with Microsoft Excel 2000 using first-order kinetics and linear regression of the actual test substance concentrations in the 0-15 cm soil depth (all replicate data) as provided by the registrant in Tables XIIIa-XVIIh (pp. 48-90).
3. Pan evaporation data were not reported for any of the test sites, however, evapotranspiration data were reported for Site 3 (CA) and Site 4 (WA) (Table B-29, p. 244; Table B-39, pp. 259-268). Additionally, average historic precipitation data were not reported for Site 1 (FL) and Site 4 (WA). As a result, the reviewer could not determine whether some of the test plots received sufficient water during the study period. The reviewer notes that the study author did state that "usually sufficient irrigation to maintain a viable crop was applied which exceeded the historical average rainfall during the growing season" (p. 19). However, the statement is vague because of the author's use of the word 'usually'. Clarification by the registrant may be necessary.
4. Control plots were not established and sampled at any of the four test sites.

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

5. The potatoes were not analyzed for residues of fenamidone at any of the four test sites.
6. The study author stated that the four field sites represent different cultural and climatic conditions under which the product may be used on the field crop, potatoes (p. 19).
7. Fenamidone chemical names (S)-1-anilino-4-methyl-2-methylthio-4-phenylimidazolin-5-one and (5S)-3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-4H-imidazol-4-one were identified as the IUPAC and CAS names, respectively, by the Compendium of Pesticide Common Names (<http://www.hclrss.demon.co.uk/index.html>).

Data Evaluation Report on the terrestrial field dissipation of Fenamidone

PMRA Submission Number {.....}

EPA MRID Number 45385904

Data Requirement: PMRA Data Code:
EPA DP Barcode: D275213
OECD Data Point:
EPA Guideline: 164-1

Test material: RPA 407213

End Use Product name: EXP 10623A

Concentration of a.i. 500 g/L

Formulation type: Suspendable Concentrate

Active ingredient

Common name: Fenamidone

Chemical name

IUPAC: (+)-(4*S*)-4-Methyl-2-methylthio-4-phenyl-(1*H*)-1-phenylamino-2-imidazolin-5-one.

CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-, (*S*)-.

CAS No: 161326-34-7.

Synonyms: Reason 500 SC Fungicide.

Methyl-2-methylthio-5-phenyl-3-phenylamino-3,5-dihydro-4*H*-imidazol-4-one.

(*S*)-1-Anilino-4-methyl-2-methylthio-4-phenylimidazolin-5-one.

(*S*)-5-Methyl-2-methylthio-5-phenyl-3-phenylamino-3,5-dihydroimidazol-4-one.

Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-, (*5S*)-.

(*5S*)-3,5-Dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-4*H*-imidazol-4-one.

RPA407213.

Dissipation of Fenamidone (California Site)

Chemical Name	Fenamidone	Washington Site
PC Code	046679	0-15 cm soil depth
MRID	45385904	
Guideline No.	164-1	

Half-life (days) = 8.7

Days Posttreatment	Fenamidone (ug/kg)	Ln (Fenamidone)
Application 1 (-35 days)	93	4.5326
Application 1 (-35 days)	107	4.6728

Dissipation of Fenamidone (Washington Site)

Attachment 2

Structures of Parent and Transformation Products

RPA 407213

IUPAC name: (S)-5-Methyl-2-methylthio-5-phenyl-3-phenylamino-3,5-dihydroimidazol-4-one
(S)-4-Methyl-2-methylthio-4-phenyl-1-phenylamino-5(4H)-imidazolone

CAS name: 4H-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-,
(S)-

CAS #: 161326-34-7

Unlabelled

With radiolabel

*Position of [¹⁴C]-radiolabel

RPA 405862

IUPAC name: 5-Methyl-5-phenyl-3-phenylaminoimidazolidine-2,4-dione

CAS name: 2,4-Imidazolidinedione, 5-methyl-5-phenyl-3-(phenylamino)-

CAS #: 153969-11-0

RPA 408056

IUPAC name: 5-Methyl-2-methylthio-5-phenyl-3,5-dihydroimidazol-4-one
4-Methyl-2-methylthio-4-phenyl-2-imidazolin-5-one

CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-

CAS #: N/A

RPA 717879

IUPAC name: 5-Methyl-5-phenylimidazolidine-2,4-dione

CAS name: 2,4-Imidazolidinedione, 5-methyl-5-phenyl-

CAS #: 6843-49-8

RPA 406012

IUPAC name: 5-Methyl-2-methylthio-3-(4-nitrophenylamino)-5-phenyl-3,5-dihydroimidazol-4-one

CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-3-[(4-nitrophenyl)amino]-5-phenyl-

CAS #: 151022-56-9

451022-66-9

RPA 410914

IUPAC name: 5-Methyl-2-methylthio-3-(2-nitrophenylamino)-5-phenyl-3,5-dihydroimidazol-4-one
(4*RS*)-4-methyl-2-methylthio-(1*H*)-1-(2-nitrophenylamino)-4-phenyl-2-imidazolin-5-one

CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-3-(2-nitrophenylamino)-5-phenyl-

CAS #: N/A

RPA 405803

IUPAC name: 5-Methyl-2-methylthio-5-phenyl-3-phenylamino-3,5-dihydroimidazol-4-one

CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3-(phenylamino)-

CAS #: 151022-37-6

RPA 409446

IUPAC name: 5-Methyl-3-(4-nitrophenylamino)-5-phenylimidazolidine-2,4-dione

CAS name: 2,4-Imidazolidinedione, 5-methyl-3-(4-nitrophenylamino)-5-phenyl-

CAS #: N/A

RPA 409445

IUPAC name: 3-(4-Aminophenylamino)-5-methyl-5-phenylimidazolidine-2,4-dione

CAS name: 2,4-Imidazolidinedione, 3-(4-aminophenylamino)-5-methyl-5-phenyl-

CAS #: N/A

RPA 407599

IUPAC name: [1-Phenyl-1-(N'-phenylhydrazinocarbonyl)-ethyl]-thiocarbamic acid S-methyl ester

CAS name: Benzeneacetic acid, α -methyl-N-thiocarboxy-, S-methyl ester, 2-phenylhydrazide

CAS #: N/A

RPA 409352

IUPAC name: 3-(4-Aminophenylamino)-5-methyl-2-methylthio-5-phenyl-3,5-dihydroimidazol-4-one

CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-3-(4-aminophenylamino)-5-methyl-2-(methylthio)-5-phenyl-

CAS #: N/A

RPA 418915

IUPAC name: (S)-5-Methyl-2-methylthio-3-[4-oxo-2,5-cyclohexadien-1-ylidene)amino]-5-phenyl-3,5-dihydroimidazol-4-one

CAS name: N/A

CAS #: N/A

RPA 410193

IUPAC name: (S)-4-Methyl-4-phenyl-1-phenylaminoimidazolidin-2,5-dione

CAS name: N/A

CAS #: N/A

RPA 409344

IUPAC name: (R,S)-2-methyl-2-phenyl-N-(phenylazocarbonyl)glycine
(R,S)-2-phenyl-2-(phenylazocarbonylamino)propionic acid

CAS name: N/A

CAS #: N/A

RPA 412636

IUPAC name: (S)-5-Methyl-5-phenylimidazolidine-2,4-dione

CAS name: 2,4-Imidazolidinedione,5-methyl-5-phenyl-, (S)

CAS #: 27539-12-4

* Position of [^{14}C] radiolabel

RPA 410995

IUPAC name: 5-Methyl-3-(2-nitrophenylamino)-5-phenylimidazolidine-2,4-dione

CAS name: 2,4-Imidazolidinedione, 5-methyl-3-[(2-nitrophenyl)amino]-5-phenyl-

CAS #: N/A

RPA 412708

IUPAC name: (S)-5-Methyl-2-methylthio-5-phenyl-3,5-dihydroimidazol-4-one

CAS name: 4H-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-, (S)-

CAS #: N/A

RPA 413255

IUPAC name: (S)-5-Methyl-2-methylthio-3-(2-nitrophenylamino)-5-phenyl-3,5-dihydroimidazol-4-one

CAS name: 4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-3-(2-nitrophenylamino)-5-phenyl-,(S)-

CAS #: N/A

* Position of [¹⁴C] radiolabel
